Comprehensive Bariatric Surgery and Education

Obesity is a disease that affects more than 72 million people in the United States. Being obese or overweight puts you at greater risk for health problems such as:

- Coronary Heart Disease
- High Blood Pressure
- Type 2 Diabetes
- Gallstones
- Breathing Problems
- Certain Cancers

If you struggle with weight issues, the Weigh to Success program at Midland Memorial Hospital is here to help. We provide a comprehensive program focused on your individual situation and develop a plan tailored to your needs.

Many factors can contribute to obesity:

- Genetics
- Illness
- Psychology
- Lifestyle Habits

At Weigh to Success, we work to determine the factors contributing to your weight issues and, through on-going counseling and support groups, we work with you to improve your health by addressing the causes of your obesity.

Weigh to Success specializes in two types of bariatric surgery. These surgeries make changes in your digestive system to help you lose weight by limiting how much you can eat or by reducing the absorption of calories, or both. The surgery options available in the Weigh to Success program are:

- Sleeve Gastrectomy
- Roux-En-Y Gastric Bypass

All bariatric surgeries are performed at Midland Memorial Hospital. At your pre-surgical consultation, your bariatric surgeon will perform an extensive evaluation to help determine which surgery option is best for you.

Bariatric surgery gives people a tool to help them lose weight. For the greatest post-surgical success, ongoing education and support is essential. The Weigh to Success team includes a bariatric surgeon, dietitian, psychologist and exercise specialist. This team will help you stay motivated and informed during your weight loss journey and beyond. Weigh to Success patients are part of the program for life.
